

Supplementary Material: Detailed Benchmark Results

This supplement reports detailed benchmark results for all datasets and both labelling strategies (`mvc`, `classic`). Each cell shows mean $\pm$ standard deviation over 10 seeds. Columns labelled 0.2, 0.5, and 0.8 refer to target labelling rates $c_{\text{calc}} \in \{0.2, 0.5, 0.8\}$.

1 Benchmark Overview

Table 2 summarizes the best observed F1 score for each dataset and labelling strategy, together with the Naive baseline and the absolute gain. These numbers are the basis for the quantitative statements in the abstract and conclusion.

Table 1 clarifies how the current manuscript extends the earlier non-SCAR study.

Table 1: Comparison of the our earlier non-SCAR study and the present manuscript.

Aspect	Earlier study	Present manuscript
Task framing	Narrower non-SCAR benchmark centered on clustering and logistic modeling	Broader PU benchmark with six methods and two non-SCAR strategies
Implementation	Initial pipeline and fewer implementation details	Python reimplementations with reproducible preprocessing and evaluation
Experimental scope	Smaller method comparison	Six SpeakLeash corpora, three c_{calc} values, ten seeds
Interpretation	Focus on model behavior	Adds dataset-level discussion, limitations, and practical selection guidance
Reporting	Summary of benchmark behavior	Expanded runtime analysis, stability analysis, and best-F1 summary

Table 2: Best observed F1 score per dataset and strategy, together with the Naive baseline and absolute gain.

Dataset	Strategy	Best F1	Naive F1	Gain
ISAP_corpus	classic	0.019	0.000	0.019
job_offers_pl_corpus	classic	0.613	0.014	0.599
open_subtitles_corpus	classic	0.906	0.861	0.045
plwiki	classic	0.771	0.013	0.758
ulotki_medyczne	classic	0.833	0.022	0.811
wolne_lektury_corpus	classic	0.692	0.365	0.327
ISAP_corpus	mvc	0.020	0.000	0.020
job_offers_pl_corpus	mvc	0.339	0.004	0.335
open_subtitles_corpus	mvc	0.900	0.827	0.073
plwiki	mvc	0.716	0.045	0.671
ulotki_medyczne	mvc	0.209	0.000	0.209
wolne_lektury_corpus	mvc	0.573	0.074	0.499

Table 3: Average wall-clock runtime by method and labelling strategy, aggregated over datasets and target labelling rates.

Method	classic [min]	mvc [min]
Naive	0.003	0.003
Clust	0.026	0.029
Strict-LassClust	4.347	3.809
Non-Strict-LassClust	4.426	4.220
LassoJoint	2.086	2.011
Spy	0.028	0.027

Table 4: Practical method-selection guide derived from the benchmark results.

Data condition	Preferred method(s)	Reason
Moderately balanced corpus with clear feature signal	LassoJoint	Strongest average retrieval quality and good use of sparse informative features
Highly imbalanced corpus or weak propensity signal	Spy	More stable when positive support is small and class separation is difficult
Need for a lightweight baseline or quick sanity check	Clust / Naive	Low runtime and simple behavior make them useful reference points
Need to stress-test label-generation assumptions	Compare classic vs mvc	Strategy sensitivity is dataset-specific and should be interpreted as part of the benchmark design

2 Labelling Strategy: mvc

Table 5: Detailed results for ISAP_corpus with labelling strategy mvc (mean $\pm$ std over 10 seeds).

Method	AUC			PR-AUC			F1

4 Feature Descriptions

Table 17 provides a comprehensive list of all 22 linguistic and stylometric features used in the benchmark. All numeric features are rescaled to the $[0, 1]$ range using min-max normalization before model training.

Table 17: Description of 22 input features (X) used in the benchmark.

Feature	Description
<code>adj_ratio</code>	Ratio of adjectives to total words
<code>adjectives</code>	Count of adjectives in the document
<code>adverbs</code>	Count of adverbs in the document
<code>avg_sentence_length</code>	Average number of words per sentence
<code>avg_word_length</code>	Average number of characters per word
<code>camel_case</code>	Count of camelCase words
<code>capitalized_words</code>	Count of words starting with uppercase letter
<code>characters</code>	Total character count (excluding whitespace)
<code>gunning_fog</code>	Gunning Fog index; estimates U.S. school grade needed to understand text
<code>lexical_density</code>	Ratio of content words (nouns, verbs, adjectives, adverbs) to total words
<code>noun_ratio</code>	Ratio of nouns to total words
<code>nouns</code>	Count of nouns in the document
<code>oovs</code>	Count of out-of-vocabulary words (not in standard Polish dictionary)
<code>pos_num</code>	Count of numerals (number-tagged part-of-speech tokens)
<code>pos_x</code>	Count of unknown or rare part-of-speech categories
<code>punctuations</code>	Count of punctuation marks
<code>sentences</code>	Count of sentences (detected by sentence boundary markers)
<code>stopwords</code>	Count of common Polish stopwords (high-frequency, low-content words)
<code>symbols</code>	Count of non-alphanumeric symbols (special characters)
<code>verb_ratio</code>	Ratio of verbs to total words
<code>verbs</code>	Count of verbs in the document
<code>words</code>	Total word count

5 Statistical Comparison for F1, AUC, AUCPR for different PU methods with classic and MVC scenarios

Table 18: Results of the paired Wilcoxon signed-rank tests comparing the classic and non-SCAR variants based on the F1 score. W – the test statistics. For each threshold parameter c , Holm’s correction was applied across the six tested methods. Statistically significant adjusted p -values ($\alpha = 0.05$) are shown in bold.

Method	$c = 0.2$		$c = 0.5$		$c = 0.8$	
	W	Holm p	W	Holm p	W	Holm p
Clust	1475	1.51×10^{-4}	445	3.87×10^{-1}	376	5.67×10^{-2}
LassoJoint	210	1.07×10^{-6}	447	4.49×10^{-1}	79.5	4.42×10^{-7}
Naive	120	5.86×10^{-1}	191	1.00	196.5	3.27×10^{-3}
